Crane Co.

Founded in 1855, Crane Co. is a diversified manufacturer of highly engineered industrial products with a substantial presence in a number of focused markets, with over 11,000 employees at over 150 locations working together across 26 countries. The Company has four business segments: Aerospace & Electronics, Fluid Handling, Payments & Merchandising Technologies, and Engineered Materials. Crane Co. is traded on the New York Stock Exchange (NYSE: CR). For more information, please visit www.craneco.com.

Crane Aerospace & Electronics

Crane Aerospace & Electronics delivers mission-critical and innovative components, systems, and services for commercial aircraft, defense, and space markets. Products and services are organized into six integrated solutions: Cabin Systems, Electrical Power Solutions, Fluid Management, Landing Systems, Microwave Solutions, and Sensing Components & Systems. For more information, visit www.craneae.com.

Electrical Power Solutions

Crane Aerospace & Electronics provides high-integrity, rugged power products supported by our heritage brands ELDEC, Keltec and Interpoint. With nearly 60 years of experience in power conversion, we offer a full line of off-the-shelf and custom power solutions for commercial aviation, defense, and space markets. As a trusted industry leader in power and advanced packaging solutions, our products meet the requirements for flight and mission critical applications while delivering the efficiency and reliability that our customers demand.

From the Mars Science Lab to commercial aircraft, missiles to fighter aircraft, our range of power products include custom, semi-custom or off-the-shelf products have proven their ability to operate in the most demanding environments. Our quality systems ensure reliable, repeatable, processes and performance.
Power Solutions

Power Solutions offers ELDEC, Interpoint and Keltec brand power conversion, power distribution and battery systems for the commercial aerospace, defense and space for use in avionics, ATA Chapter 24 Power Systems, communications, electronic countermeasures, missiles, radar, navigation, guidance and utility systems. Our power products, which are well known for high performance and high reliability, have proven performance in military/defense, aerospace, space and industrial applications. From modular power supplies to custom-designed power sub-systems, we can deliver what you need. Our range of power offerings include custom, semi-custom or off-the-shelf products. Our quality systems ensure reliable, repeatable, processes and performance.

DC-DC Converters and EMI Filters

Interpoint DC-DC converter and EMI filter modules have proven performance in extreme environments where high reliability is required and failure is not an option. They are ideal for aerospace, military/defense, space, medical and industrial applications. We offer a standard line of high reliability DC-DC power converters fully qualified up to Class K, QML of MIL-PRF-38534. To meet demanding time and cost targets, choose a product from the standard converters and filters. Over 1,000 off-the-shelf high-reliability DC-DC power conversion products are available. For more information please visit www.craneae.com/interpoint.

Space Qualified DC-DC Converters and EMI Filters

Our Interpoint space qualified DC-DC converters and EMI filters are in the power systems of the Mars Rovers, Mars Science Laboratory, Phoenix Lander, Hubble Space Telescope, Cassini-Huygens and other out-of-this-world applications.

The converters are available as Class H or K of MIL-PRF-38534 on Standard Microcircuit Drawings (SMD) with Radiation Hardness Assurance (RHA) levels of "O" (prototypes) with no RHA level, "P" 30 krad(Si), "L" 50 krad(Si) or "R" 100 krad(Si). Single event effects (SEE) LET performance to 86 MeV cm²/mg

Our EMI Filters are designed exclusively with passive components providing maximum tolerance for space environment requirements. They are available with RHA level O (no RHA) or RHA level "H" 1000 krad(Si).
Interpoint DC-DC Converters and EMI filters Overview

Interpoint Product Overview

Innovative Solutions
With over forty years of experience, we are your first source for power conversion products for high reliability applications. We have provided innovative power solutions for space aerospace, military/defense and industrial applications where size, weight and reliability are critical to program success. Our space products are available as prototype (OO), Class H-QML or Class K-QML. The products are classified as EAR99 with the exception of 100 krad (RHA R) products. Our space DC-DC converters are rated to 86 MeV cm²/mg for single event effects (SEE) linear event transfer (LET) performance.

Standard Power Conversion
We offer a standard line of DC-DC power converters fully qualified up to MIL-PRF-38534 Class H or K, QML. To meet demanding time and cost targets, choose a product from the standard converters and filters. We offer over 1,000 power conversion products.

Part Numbering
Our part numbering indicates the series (family), input voltage, output voltage, number of outputs, package configuration, screening and radiation hardness assurance (RHA) level.

Technical Support
Applications Engineers are available to provide technical support by phone or email. Call +1 425-882-3100, email powerapps@craneae.com. For the fastest response to a voice message or email please include your name, company name, a phone number, the model number and a brief statement of the problem.

SMFLHP SERIES™ CONVERTERS—100 WATT

- Radiation hardened space DC-DC converter
  - Single event effects (SEE) LET performance to 86 MeV cm²/mg
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA) P = 30 krad(Si), L = 50 krad(Si), R = 100 krad(Si)
  - 50 - 300 rad(Si)/sec dose rate (Condition A)
  - 10 mrad(Si)/sec dose rate (Condition D)
- Parallel up to 3 converters—maximum recommended power is 80% of the total available power.
- Operating temperature -55°C to +125°C
- Qualified to MIL-PRF-38534 Class H and K
- Input voltage range 19 to 40 volts
- Transient protection up to 80 volts for 50 ms
- Converter will shut down at an input voltage above approximately 45 volts
- Fully isolated, magnetic feedback
- Fixed high switching frequency
- Remote sense and output trim on single output models
- Primary and secondary inhibit function
- Synchronization input and output
- Indefinite short circuit protection
- High power density with up to 87% typical efficiency

The SMFLHP Series uses a unique dual loop feedback technique that controls output current with an inner feedback loop and output voltage with a cascaded voltage mode feedback loop. The additional secondary current mode feedback loop improves transient response in a manner similar to primary current mode control and allows for ease of paralleling. Available with Space Prototype (non-QML), Class H-QML and Class K-QML Quality Assurance screening with Radiation Hardness Assurance (RHA) level available up to “R” per MIL-PRF-38534. See Screening Tables 1, 2 and 3.

1. Up to 70% of the total power is available from either output providing the opposite output is carrying at least 30% of the power in use. The specification shown is the maximum total current/power.
SMFL SERIES™ CONVERTERS—65 WATT

- Radiation hardened space DC-DC converter
  - Single event effects (SEE) LET performance to 86 MeV cm²/mg
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA)
    \[ P = 30 \text{ krad(Si)}, L = 50 \text{ krad(Si)}, R = 100 \text{ krad(Si)} \]
  - 50 - 300 rad(Si)/sec dose rate (Condition A)
  - 10 mrad(Si)/sec dose rate (Condition D)
- Parallel up to 3 converters—maximum recommended power is 80% of the total available power.
- Operating temperature -55 °C to +125 °C
- Qualified to MIL-PRF-38534 Class H and K
- Input voltage range 16 to 40 volts
- Transient protection up to 80 volts for 50 ms
- Converter will shut down at an input voltage above approximately 45 volts
- Fully isolated, magnetic feedback
- Fixed high switching frequency
- Remote sense and output trim on single output models
- Primary and secondary inhibit function
- Synchronization input and output
- Indefinite short circuit protection
- High power density with up to 85% typical efficiency

The SMFL Series converters have two inhibit terminals (INH1—primary side and INH2—secondary side) that can be used to disable power conversion, resulting in a very low quiescent input current and no generation of switching noise. The SMFL uses a unique dual loop feedback technique that controls output current with an inner feedback loop and an output voltage with a cascaded voltage mode feedback loop. Available with Space Prototype (non-QML), Class H-QML and Class K-QML Quality Assurance screening, with a Radiation Hardness Assurance (RHA) level available up to “R” per MIL-PRF-38534. See Screening Tables 1, 2 and 3.

SMP120 SERIES™ CONVERTERS—49 WATT

- Radiation hardened space converter
  - SEB (no burn-out) 43 MeV cm²/mg
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA)
    - L = 50 krad(Si), R = 100 krad(Si)
    - 50 - 300 rad(Si)/sec dose rate (Condition A)
    - 10 mrad(Si)/sec dose rate (Condition D)
- Output overvoltage protection
- Inrush current limit
- Output trim ±10%
- Operating temperature -55° to +125°C
- Screened to MIL-PRF-38534 Class H and K
- Input voltage range 80-160 volts
- Transient protection 180 volts for 100 ms
- Fully isolated, magnetic feedback
- Fixed high frequency switching
- Remote sense
- Inhibit function, synchronization input
- Indefinite short circuit protection

The Interpoint® SMP120 Series™ of DC-DC converters offers up to 49 watts of power in a radiation hardened design. The low profile SMP120 converters are manufactured in our fully certified and qualified MIL-PRF-38534 Class K production facility and packaged in hermetically sealed steel cases. They are ideal for use in programs requiring high reliability, small size, and high levels of radiation hardness assurance.

The SMP120 converters are switching regulators which use a current mode control single switch forward design with a nominal switching frequency of 500 kHz. Close regulation is maintained with advanced constant frequency pulse width modulation design techniques. The SMP120’s current mode control topology provides high levels of input-to-output ripple rejection.

Available with Space Prototype (non-QML), or screened to Class H-QML or Class K with an RHA level available up to “R” per MIL-PRF-38534, pending product qualification. See Screening Tables 1, 2 and 3.
SMRT SERIES™ CONVERTERS—35 WATT
SINGLE, DUAL OR TRIPLE

- Radiation hardened space DC-DC converter
  - Single event effects (SEE) LET performance to 86 MeV cm²/mg
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA)
    \[ P = 30 \text{ krad(Si)}, L = 50 \text{ krad(Si)}, R = 100 \text{ krad(Si)} \]
  - 50 - 300 rad(Si)/sec dose rate (Condition A)
  - 10 mrad(Si)/sec dose rate (Condition D)
- Built in MIL-STD-461 EMI filter
- Output trim from 51% to 124% of nominal
- Operating temperature -55° to +125°C
- Input voltage range 19 to 56 volts
- Transient protection 80 volts for 120 ms
- Fully isolated, 5 port isolation
- Dual magnetic feedback
- Fixed high frequency switching
- Remote sense
- Inhibit function
- Synchronization input
- Indefinite short circuit protection
- Meets MIL-STD-704A transient standards

Two independent feedback loops are used to regulate the dual and triple outputs, one feedback loop regulates the two-phased single output. Each set of outputs is electrically isolated from the other and from the input. This product configuration eliminates cross regulation effects between output sets.

Configurations:
- Single Output: One dual-phase output
- Dual Output: Two isolated single-phase outputs
- Triple Output: One single-phased output (Main) isolated from one single-phase dual output (± Auxiliary)

The output voltage of each set can be trimmed upward or downward by as much as 51% to 124% of nominal. Available with Space Prototype (non-QML) or Class E-QML, Quality Assurance screening and a Radiation Hardness Assurance (RHA) level available up to "R" per MIL-PRF-38534. See Screening Tables 1, 2 and 3.

2. Up to the maximum specified auxiliary output current is available from either auxiliary output provided the total auxiliary output power does not exceed 15 watts. The specification shown is the maximum total current/power.
SMTR SERIES™ CONVERTERS—30 WATT

- Radiation hardened space DC-DC converter
  - Single event effects (SEE) LET performance to 86 MeV cm²/mg
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA)
    \[ P = 30 \text{ krad(Si)}, L = 50 \text{ krad(Si)}, R = 100 \text{ krad(Si)} \]

  - 10 mrad(Si)/sec dose rate (Condition D)
- Operating temperature -55° to +125°C
- Qualified to MIL-PRF-38534 Class H and K
- Input voltage range 16 to 40 volts
- Transient protection 50 volts for 50 ms
- Fully isolated, magnetic feedback
- Fixed high frequency switching, 600 kHz typical
- Trim function or remote sense on single output models
- Inhibit and synchronization functions
- Indefinite short circuit protection
- Typical efficiency up to 83%

The SMTR Series™ of 28 volt DC-DC converters offers up to 30 watts of output power from single or dual output configuration. They operate over the full military temperature range of -55° to +125°C with up to 84% efficiency. Available with Space Prototype (non-QML), Class H-QML and Class K-QML Quality Assurance screening with a Radiation Hardness Assurance (RHA) level available up to “R” per MIL-PRF-38534. See Screening Tables 1, 2 and 3.

MFP SERIES™ POINT OF LOAD CONVERTER

- Radiation hardened space DC-DC converter
  - Single event effects (SEE) LET performance to 85 MeV cm²/mg
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA)
    - P = 30 krad(Si), L = 50 krad(Si), R = 100 krad(Si)
  - 50 - 300 rad(Si)/sec dose rate (Condition A)
  - 10 mrad(Si)/sec dose rate (Condition D)
- No external components required
- Up to 92% typical efficiency, flat down to 30% load
- Qualified up to MIL-PRF-38534 Class K
- Input voltage range 3.0 to 6.0 volts dc
- Input transient survivability to 15 volts for up to 1 sec.
- Inhibit and sync functions
- Current monitoring,
- Current sharing pin for parallel operation
- Four pin-selectable, preset voltages: 0.8, 1.6, 2.5 and 3.3
- Output voltage continuously adjustable from 0.8 to 3.5 volts with resistors
- Indefinite output short circuit protection
- Remote sense and voltage margining
- Case available as standard or flanged

The MFP Series™ of DC-DC converters do not require any external components to achieve all specified performance levels. They are a high-reliability, high-efficiency point of load converter for use with a 3.3 or a 5 volt input bus. The MFP0507S model has the flexibility to be set for any output voltage from 0.64 to 3.5 volts. The converter operates from an input of 3.0 to 6.0 VIN with an undervoltage shutdown below 3 volts and an overvoltage shutdown above 6 volts. The converter can withstand up to a 15 volt transient for up to 1 second.

The non-isolated, feature-rich MFP uses a Buck converter design with synchronous rectification. The design allows the unit to operate synchronously to no output load, ensuring high efficiency at the lightest loads without switching off the synchronous devices. Important features include a solid state switch, inrush current limiting, synchronization with an external system clock and the ability to current share allowing multiple devices to supply a common load. Radiation hardened, with a Radiation Hardness Assurance (RHA) level available up to "R" per MIL-PRF-38534. See Screening Tables 1, 2 and 3.

SMHF42 SERIES™ CONVERTERS—15 WATTS

- Radiation hardened space DC-DC converter
  - Single event effects (SEE) LET performance to 86 MeV cm2/mg 1
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA) 1
    - L = 50 krad(Si), R = 100 krad(Si)
  - 50 - 300 rad(Si)/sec dose rate (Condition A) 1
  - 10 mrad(Si)/sec dose rate (Condition D) 1
- Operating temperature -55°C to +125°C
- Screened to MIL-PRF-38534 Class H and K 1
- Input voltage range 35 to 55 volts
- Transient protection 80 volts for 50 ms
- Fully isolated
- Fixed high frequency switching
- Inhibit function
- Synchronization input
- Indefinite short circuit protection
- Undervoltage lockout

The Interpoint® SMHF42 Series™ of 42 volt DC-DC converters offers up to 15 watts of power in a radiation hardened design. The low profile SMHF42 converters are manufactured in our fully certified and qualified MIL-PRF-38534 Class K production facility and packaged in hermetically sealed steel cases. They are ideal for use in programs requiring high reliability, small size, and high levels of radiation hardness assurance. They are targeted for operation on a 42 volt satellite power bus. The units are capable of withstanding transients up to 80 volts for up to 50 ms.

Available with Space Prototype (non-QML), or screened to Class H-QML or Class K with an RHA level available up to “R” per MIL-PRF-38534, pending product qualification. See Screening Tables 1, 2 and 3.

1. Up to 70% of the total current/power is available from either dual output, providing the opposite output is carrying at least 30% of the power in use. The specification shown is the maximum total current/power.
SMHF SERIES™ CONVERTERS—15 WATTS

- Radiation hardened space DC-DC converter
- Single event effects (SEE) LET performance to 86 MeV cm²/mg
- Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA) P = 30 krad(Si), L = 50 krad(Si), R = 100 krad(Si)
- 50 - 300 rad(Si)/sec dose rate (Condition A)
- 10 mrad(Si)/sec dose rate (Condition D)
- Operating temperature -55°C to +125°C
- Qualified to MIL-PRF-38534 Class H and K
- Input voltage range 16 to 45 volts
- Transient protection 50 volts for 50 ms
- Fully isolated
- Fixed high frequency switching
- Inhibit function
- Synchronization input
- Indefinite short circuit protection
- Undervoltage lockout

The SMHF Series™ synchronization feature allows the user to match the switching frequency of the converter to the frequency of the system clock. This allows the user to adjust the nominal 550 kHz operating frequency to any frequency within the range of 500 kHz to 600 kHz by applying a compatible input of the desired frequency to pin 5. Available with Space Prototype (non-QML), Class H-QML and Class K-QML Quality Assurance screening, with a Radiation Hardness Assurance (RHA) level available up to "R" per MIL-PRF-38534. See Screening Tables 1, 2 and 3.

</tbody>
</table>

1. Up to 80% of the total current/power is available from either dual output, providing the opposite output is carrying at least 20% of the power in use. The specification shown is the maximum total current/power.

The SMSA Series™ provides excellent dynamic response and noise rejection. SMSA converters inhibit feature can disable internal switching resulting in low standby current and no generation of switching noise. Available with Space Prototype (non-QML), Class H-QML and Class K-QML Quality Assurance screening, with a Radiation Hardness Assurance (RHA) level available up to "R" per MIL-PRF-38534. See Screening Tables on page 13 and page 13.

## SLH SERIES™ CONVERTERS—1.5 WATT

- Radiation hardened space DC-DC converter
  - Single event effects (SEE) LET performance to 86 MeV cm²/mg
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA)
    - L = 50 krad(Si), R = 100 krad(Si)
- Operating temperature -55°C to +125°C
- Qualified to MIL-PRF-38534 Class H and K
- Input voltage range 16 to 40 V
- Transient protection 50 V for 50 ms
- Fully isolated magnetic feedback
- Inhibit function

At just 0.79 square inches, the SLH Series™ of 28 V DC-DC converters delivers 1.5 watts of power while saving significant board area. Connecting the load between positive and negative outputs on the dual models, leaving the common unconnected, results in double the output voltage. Available with Space Prototype (non-QML), Class H-QML and Class K-QML Quality Assurance screening with a Radiation Hardness Assurance (RHA) level available up to “R” per MIL-PRF-38534. See Screening Tables 1, 2 and 3.

Interpoint Space Qualified EMI Filters

SFME28-461™ EMI FILTER—10 AMPS

- Radiation hardened space EMI filter
  - Total ionizing dose (TID) guaranteed per MIL-STD-883 method 1019, radiation hardness assurance (RHA) H, 1000 krad(Si)
  - Passive components used for maximum tolerance in space environments
- Attenuation 70 dB at 500 kHz and 1 MHz, typical
- Operating temperature -55° to +125°C
- Qualified to MIL-PRF-38534 Class H and
- Nominal 28 V input, 0 V to 50 V operation
- Up to 10 A throughput current
- Compliant to MIL-STD-461C CE-03
- Compatible with MIL-STD-704 A-E 28 volt power bus

The SFME28-461™ EMI filter modules are designed to reduce the reflected input ripple current of high frequency DC-DC converters. These filters are intended for use in 28 volt applications which require MIL-STD-461 levels of conducted emissions. One filter can be used with multiple converters up to the rated throughput current of the filter. Available with Space Prototype (non-QML), Class H-QML and Class K-QML Quality Assurance screening. See Screening Tables 4 and 5.

The STF28-461™ EMI filter module has been designed for use with the SMSA flyback power converters. Multiple SMSA power converters can be operated from a single filter provided the total power line current does not exceed the filter maximum rating. The STF filter will reduce the SMSA's power line reflected ripple current to the limits of MIL-STD-461C CE-03.

Available with Space Prototype (non-QML), Class H-QML and Class K-QML Quality Assurance screening. See Screening Tables 4 and 5.
PIN TERMINAL ADAPTOR

- Adapts Interpoint flanged, side-leded cases to upleaded or downleaded configurations
- Compatible with many families of Interpoint products for use in high reliability applications
- Low resistance
- Copper alloy with solder plating over nickel

Our side-leded packages can be adapted with PIN terminal adapters to fit a variety of configurations. These versatile adapters slide over the ends of side-leded package terminals and are intended to be soldered to the leads to provide an up-leded or down-leded configuration.
Table is for reference only. See individual Series' datasheets for specific screening.

Test methods are referenced to MIL-STD-883 as determined by MIL-PRF-38534.

### Notes
1. Non-QML prototype products may not meet all of the requirements of MIL-PRF-38534.
2. All processes are QML qualified and performed by certified operators.
3. Class H or K QML products that have no SMD number are marked “CHP, CHL, CHR, CKP, CKL or CKR” per MIL-STD-38534, Table III instead of “QML”.
4. Class E is based on Class K requirements of MIL-PRF-38534 with the exception that Constant Acceleration is limited to 3000 g maximum including qualification testing.
5. “O” in the RHA designator position in Interpoint model numbers indicates DLA RHA -“- defined as no RHA.
6. Not required by DLA but performed to assure product quality.
7. Burn-in temperature designed to bring the case temperature to +125°C minimum. Burn-in is a powered test.

Table 3: Space Radiation Hardness Assurance DC-DC Converters Class H, E, and K with RHA P, L and R

Test methods are referenced to MIL-STD-883 as determined by MIL-PRF-38534.

Notes

1. DLA has approved the RHA plan for Interpoint power products. Our SMD products with RHA “P”, “L” or “R” code meet DLA requirements.
2. Non-QML prototype products may not meet all of the requirements of MIL-PRF-38534.
3. Class H or K QML products that have no SMD number are marked “CHP, CHL, CHR, CKP, CKL or CKR” per MIL-STD-38534, Table III instead of “QML”.
4. Class E is based on Class K requirements of MIL-PRF-38534 with the exception that Constant Acceleration is limited to 3000 g maximum including qualification testing.
5. “O” in the RHA designator position in Interpoint model numbers indicates DLA RHA “-” defined as no RHA.
6. Radiation sensitive components internal to the devices are procured with radiation guarantees or undergo radiation lot acceptance testing (RLAT) performed per condition A, method 1019 of MIL-STD-883.
7. Representative devices were initially High Dose Rate (HDR) tested using condition A of method 1019 of MIL-STD-883 to ensure RHA designator levels. Representative devices have also been Low Dose Rate (LDR) tested using condition D of method 1019 of MIL-STD-883 to the RHA designator levels. Representative devices will also be re-tested after design or process changes that can affect RHA response of this device.
8. Single event testing was performed on a converter to 86 MeV-cm²/mg using 15 MeV/nucleon gold ions with no latch-up, burn-out, functional interrupts, or gate ruptures exhibited. Single event upsets (output voltage transients) may be present up to 86 MeV-cm²/mg.
Table is for reference only. See individual Series' datasheets for specific screening.

Element Evaluation: Component testing/screening per MIL-STD-883 as determined by MIL-PRF-38534

**Table 4: Element Evaluation Space EMI Filters Prototype, Class H and K**
Table 5: Environmental Screening Space EMI Filters Prototype, Class H and K, RHA H

### Notes
1. DLA has approved the RHA plan for Interpoint power products. Our SMD products with RHA “H” code meet DLA requirements.
2. Non-QML products, prototype (OO), may not meet all of the requirements of MIL-PRF-38534.
3. All processes are QML qualified and performed by certified operators.
4. Class H or K QML products that have no SMD number are marked “CHH, CKH” per MIL-STD-38534, Table III instead of “QML”.
5. “O” in the RHA designator position in Interpoint model numbers indicates DLA RHA “-” defined as no RHA.
6. Our EMI filters are designed exclusively with passive components providing maximum tolerance for space environment requirements.
7. Not required by DLA but performed to assure product quality.
8. Burn-in temperature designed to bring the case temperature to +125°C minimum. Burn-in is a powered test.
9. Interpoint EMI filters are designed exclusively with passive components providing maximum tolerance for space environment requirements. RHA level H is guaranteed to 1000 krad(Si).
Locations

**Lynnwood Operations**

Interpoint® products  
All Class K products are built in Lynnwood  
Lynnwood, Washington, USA  
Facility: 81,000 square feet  
Founded: 1969

**Quality Certifications**

- Defense Logistics Agency's (DLA)  
  MIL-PRF-38534 Qualified Manufacturers List (QML)  
- NASA's Preferred Parts List (PPL)  
- Products qualified to Class H or Class K, QML  
- ISO 9001:2015/AS9100D  
- ISO 134855:2016

Crane was one of the first manufacturers to achieve certification to Class K, QML, per MIL-PRF-38534 and to qualify a Class K, QML, hybrid DC-DC converter to a Standard Microcircuit Drawing. This followed in the tradition of being one of the first manufacturers to certify to Class H per MIL-STD-1772. The tradition continues at our Lynnwood location.

Our DC-DC converters and EMI filters are well known for their reliable performance in military/aerospace applications and in the far reaches of space.

**Kaohsiung Operations**

Kaohsiung, Taiwan  
Facility: 35,000 square feet (built in 2017)  
Founded: 1983

**Quality Certifications**

- Defense Logistics Agency's (DLA, formerly DSCC)  
  MIL-PRF-38534 Qualified Manufacturers List (QML)  
- Products qualified to Class H-QML  
- ISO 9001:2015/AS9100D

Building 1 of 4  
Kaohsiung, Taiwan  
16706 13th Avenue West

Quality Systems Overview–Lynnwood and Kaohsiung

• The quality management system of Crane Electronics, Inc., Lynnwood and Crane Electronics Corporation, Kaohsiung have been certified to ISO 9001:2015 and AS9100D on certificates 1655 and 1657 by the International Standards Authority, Inc. (www.isaregistrar.com).

• Our Lynnwood and Kaohsiung facilities are on the Defense Logistics Agency’s (DLA) Qualified Manufacturers List (QML) of hybrid microcircuits with products compliant up to Class H (Lynnwood and Kaohsiung) and Class K (Lynnwood) of MIL-PRF-38534. Our manufacturing facilities are audited by a US government organization with customer participation.

• Standard Microcircuit Drawings (SMD) of our DC-DC converters are available to Class H and K of MIL-PRF-38534. DLA Drawing EMI filters are available to Class H and K of MIL-PRF-38534. The government documents may be viewed at https://landandmaritimeapps.dla.mil/programs/smcfr/.

• Components and materials used in product assembly are purchased against published revision controlled source control drawings (SCD). Characteristics and allowed suppliers are controlled by specific SCDs. A system is in place to review components and materials prior to stocking. Instruments such as the X-ray fluorescence (XRF) are used to ensure that supplier certifications accurately describe the material. Our high reliability QML products comply with MIL-PRF-38534 specifications, which do not allow the use of pure tin. Our other products may have pure tin. Refer to our “Lead and Other RoHS Materials” letter for more information.

• Components and materials used in product assembly are purchased against published revision controlled source control drawings (SCD).

• Documented revision controlled procedures and work instructions are in use for all operations that affect quality.

• Radiation hardness assurance (RHA) levels available referenced to MIL-PRF-38534. Our Lynnwood facility has a DLA approved RHA plan for Interpoint power products. Our SMD products with RHA “P,” “L,” “R” and “H” level meet DLA RHA requirements.

• Travelers are used to sequence and control operations at in-process, final and special inspection situations.

• Quality documents are specifically identified and retained as specified in our document control procedure. The standard retention period for critical documents is 15 years.

• Quality manual QA-040 (www.interpoint.com/012) is the controlling document for the quality system.

• Personnel performing quality functions are given the responsibility, authority and organizational freedom to identify and evaluate quality concerns as well as to initiate corrective action.

• Contracts are reviewed to identify and make timely provisions for special or unusual circumstances.

• As a minimum, self audits of the quality system are completed annually.
Interpoint Product Quality Systems and Certifications

Certifications, Qualifications and Standards-Lynnwood and Kaohsiung

- ANSI/ESD S20.20—Electrostatic Discharge Control Program. We use a multi-level ESD damage prevention approach including operator training, continuously monitoring wrist grounding straps, static dissipative smocks for personnel, static dissipative work surfaces and floors, air ionizers at work stations and faraday cages for parts movement.
- ANSI/IPC-A-600—Acceptability of Printed Boards
- ANSI-Z540—Calibration Laboratories and Measuring and Test Equipment—General Requirements
- ASQC-Z1.4—Procedures, Sampling and Tables for Inspection by Attributes
- ISO 14644—Cleanrooms and Controlled Environments. Particle count monitoring, laminar flow benches and contamination preventing smocks for personnel all contribute to maintaining the required levels of cleanliness.
- MIL-STD-883—Test Method Standard for Microcircuits
- MIL-PRF-38534—Hybrid Microcircuits, General Specifications for
- Quality Certification—Employees who work with products are individually certified in the required skills. Training and certification are documented and records are maintained. Inspectors are tested for color vision and visual acuity.
- QML-38534—Qualified Manufacturer’s List of Products Qualified under Performance Specification MIL-PRF-38534 Hybrid Microcircuits, General Requirements for
- Restriction of Hazardous Substances (RoHS), Waste Electrical and Electronic Equipment (WEEE) and Registration, Evaluation, and Authorization of Chemicals (REACH) are addressed in “Lead and Other RoHS Materials”.

Radiation Tolerance: Radiation Hardness Assurance (RHA)

Radiation hardness assurance (RHA) refers to the levels specified in MIL-PRF-38534, Appendix G and indicates the levels of radiation products or components will withstand. Our Lynnwood facility has a DLA approved RHA plan.

Our model numbers use an “O” in the RHA designator position to indicate the “-” (dash) RHA level of MIL-PRF-38534, which is defined as “no RHA.”

Some of the major programs which use our products:

**GEO/LEO Satellites**
- Amazonas
- Aquarius
- CloudSat
- Direct TV
- EchoStar
- Environmental Mapping and Analysis Program – EnMAP
eRosita – extended ROentgen Survey with an Imaging Telescope Array
- FormoSat
- Galileo GPS (ESA)
- Geostationary Lightening Mapper – GLM
- Geostationary Operational Environmental Satellites – GOES
- Global Change Observation Mission – GCOM
- Global Navigation Satellite System – GLONASS
- Gonets
- Gravity Recovery and Interior Lab – GRAL
- Hubble Space Telescope
- Ice Cloud and Land Elevation Satellite – ICESat
- India Remote Sensing Satellite – IRS
- Intelsat
- International Gamma Ray and Astrophysics Lab – INTEGRAL
- International Space Station – ISS
- Joint Polar Satellite System – JPSS
- Kepler
- Landsat
- Malaysia East Asia Satellite – MEASAT
- NASA Polar
- Optus
- Proba
- QuetzSat
- Stratospheric Aerosol and Gas Experiment III-ISS – SAGE
- SES
- Soil Moisture Active Passive – SMAP
- Spectr-Roentgen-Gamma – SRG
- Telstar
- TerreStar
- Thor
- ViaSat
- Wind Mission

**Crew Equipment and Vehicles**
- Advanced Neutron Spectrometer
- Orion Multi-Purpose Crew Vehicle
- MPCV

**Land Observatory**
- Chandra X-Ray Observatory

**Launch Vehicles and Support**
- Ariane
- Cyclone 4
- Epsilon
- Spacelift Range System – SLRS

**Mars**
- ExoMars Trace Gas Orbiter – TGO
- InSight Mars Lander
- Mars Exploration Rovers – MER
- Mars Reconnaissance Orbiter – MRO
- Mars Science Lab – MSL, Curiosity

**Solar System**
- Cassini-Huygens – Saturn
- Dawn – Solar System
- Luna Glob – Moon
- Solar Orbiter
