

FMCE-0528 EMI Input Filters

-0.5 TO 50 VOLT INPUT – 5 AMP

FEATURES

- Attenuation 60 dB at 500 kHz, typical
- Operating temperature -55° to +125° C
- Nominal 28 volt input,
- -0.5 to 50 volt operation for FMCE-0528 ¹
- Transient rating -0.5 to 80 volt for 1 second FMCE-0528
- 5 amp throughput current
- Compliant to
- MIL-STD-461C CE03
- MIL-STD-461D, E and F CE102
- MIL-STD-461C CS01
- MIL-STD-461D, E, and F CS101
- Compatible with MIL-STD-704 A-E dc voltage transient surges. ¹

MODEL	CURRENT (A)
FMCE-0528-TR ¹	5
FMCE-0528 ¹	5

DESCRIPTION

The Interpoint® FMCE-0528™ EMI filters have been specifically designed to reduce the input line reflected ripple current of Interpoint MFK, MFX, MWR, MHV and MHF+ Series of DC-DC converters. The filter can be used with combinations of the lower power converters; up to two MTR series converters or a single MFL series converter up to the rated current of the filter. These filters are intended for use in 28 volt applications which must meet MIL-STD-461 levels of conducted emissions. The FMCE-0528 EMI filters provide up to 5 amps of throughput current in a low profile package. The filters are manufactured in our fully certified and qualified MIL-PRF-38534 Class H production facility and packaged in hermetically sealed steel cases. They are ideal for use in programs requiring high reliability and small size.

The FMCE-0528 filters are built using thick-film hybrid technology and are hermetically sealed in metal packages for military, aerospace, and other high-reliability applications. Only ceramic capacitors are used in the filters to ensure reliable high temperature operation.

The filters are offered with standard screening, “ES” screening, or fully compliant to “883” MIL-PRF-38534 Class H screening. A DLA Drawing is available, see Table 2 on page 3.

MIL-STD NOISE MANAGEMENT

When used in conjunction with Interpoint converters, the FMCE-0528 and FMCE-0528-TR filters reduce input ripple current within the frequency band of 100 kHz to 50 MHz. When used with an Interpoint converter, performance exceeds the CE03 test of MIL-STD-461C and meets the requirements of CS01 of MIL-STD-461C. These filters also meet CE102 and CS101 of MIL-STD-461D, E and F.

OPERATING TEMPERATURE

The filters are rated to operate, with no degradation of performance, over the temperature range of -55° C to +125° C (as measured at the baseplate). Above +125° C, current must be derated as specified in Table 4 on page 4. A DLA Drawing is available, see Table 2 on page 3.

INSERTION LOSS

Low dc resistance design results in a maximum power loss of less than 3% with typical input voltage.

LAYOUT REQUIREMENT

The case pin, and ideally the case, should be tied to the case of the converter through a low-inductance connection.

TRANSIENT SUPPRESSION - FMCE-0528-TR ONLY

The FMCE-0528-TR ¹ filter also features an optional fast-reacting (1 pico second) transient suppressor (transorb SMCG40A) which begins clamping the input voltage at approximately 47 volts, protecting the DC-DC converter from damage from induced line transients.

The FMCE-0528 ¹ does not have the transorb and is designed for those applications that require a wider input voltage range (-0.5 to 50 volts).

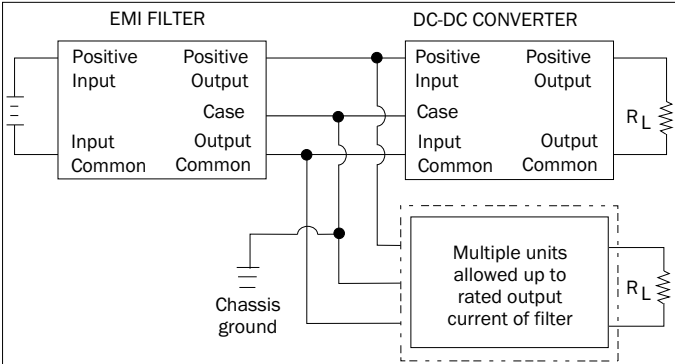

Note 1.

a) The FMCE-0528-TR has a transorb and will not protect against transients as defined in MIL-STD-704A Figures 8 and 9, curves 1 and 2. Operation beyond the defined specifications may damage the transorb.

b) The FMCE-0528 does not have a transorb and does not clamp the input voltage. Transients of higher than 40 volts will not harm the filter but will be passed to the converter.

FMCE-0528 EMI Input Filters

-0.5 TO 50 VOLT INPUT – 5 AMP

The case ground connection between the filter and the converter should be as low an impedance as possible to minimize EMI. Direct contact of baseplate to chassis ground provides the lowest impedance.

MODEL NUMBER OPTIONS ¹				
To DETERMINE THE MODEL NUMBER ENTER ONE OPTION FROM EACH CATEGORY IN THE FORM BELOW.				
CATEGORY	Base Model and Input Voltage	Transorb ²	Case Option ³	Screening ⁴
OPTIONS	FMCE-0528	(no transorb, leave blank) -TR (with transorb)	(standard, leave blank) -F (Flanged)	(standard, leave blank) ES 883
FILL IN FOR MODEL # ⁵	FMCE-0528	_____	_____	/ _____
Notes 1. See Figure 4, above, for an example of a model number. 2. The FMCE-0528 does not have a transorb. The FMCE-0528-TR has a transorb for transient suppression (see page 1). 3. Case Options: For the standard case, Figure 10 on page 6, leave the case option blank. For the flanged case option, Figure 11 on page 7, insert the letter F in the Case Option position. 4. Screening: For standard screening leave the screening option blank. For other screening options, insert the desired screening level. For more information see Table 6 on page 8 and Table 7 on page 9. 5. If ordering by model number add a "-Q" to request solder dipped leads (FMCE-0528/883-Q).

	T _C = 125°C	–	–	3.8	–	–	3.8	

Notes

1. Guaranteed by characterization test and/or analysis. Not a production test.
2. Transients:
 - a) The FMCE-0528-TR has a transorb and will not protect against transients as defined in MIL-STD-704A Figures 8 and 9, curves 1 and 2. Operation beyond the defined specifications may damage the transorb. It will begin to clamp the voltage at approximately 47 volts.
 - b) The FMCE-0528 does not have a transorb and does not clamp the input voltage. Transients of higher than 40 volts will not harm the filter but will be passed to the converter.
3. 0.5 ohm source impedance
4. The FMCE-0528 does not have a transorb and does not clamp the input voltage.
5. Typical applications result in V_{OUT} within 2% of V_{IN}.

Test methods are referenced to MIL-STD-883 as determined by MIL-PRF-38534.

Notes

1. Non-QML products may not meet all of the requirements of MIL-PRF-38534.
2. All processes are QML qualified and performed by certified operators.
3. Class H QML products have an SMD number
4. Not required by DLA but performed to assure product quality.
5. Burn-in temperature designed to bring the case temperature to +125°C minimum. Burn-in is a powered test.
