

MSA+ Single and Dual DC-DC Converters

PRELIMINARY - 15 TO 50 VOLT INPUT - 6 WATT

FEATURES

- Small size, 1.13 in² (7.31 cm²)
- -55° to +125°C operation
- 15 to 50 volt input
- Low output ripple
- 80 volts for 50 ms transient protection
- Magnetic isolation
- Fixed high frequency switching
- Inhibit function
- Indefinite short circuit protection
- Up to 76% efficiency, typical

DESCRIPTION

The Interpoint® MSA+ Series™ of DC-DC converters offers up to 6 watts of power. The low profile MSA+ converters are manufactured in our fully certified and qualified MIL-PRF-38534 Class H production facility and packaged in hermetically sealed steel cases. Thick-film hybrid techniques provide military/ aerospace reliability levels and optimum miniaturization. The hermetically sealed case is 1.065 by 1.065 inches with a height of 0.350 inches. Power density for the MSA+ Series converters is 15 watts per cubic inch.

SCREENING

The converters are offered with /883 (Class H), ES or standard screening. For screening options and descriptions see Table 8 on page 13 and Table 9 on page 14.

CONVERTER DESIGN

The converters are switching regulators that use a flyback converter design with a constant switching frequency of 400 kHz typical. They are regulated, isolated units using a pulse width modulated topology and are built as high reliability thick-film hybrids. Isolation between input and output circuits is provided with a transformer in the forward power path and in the feedback control loop.

Excellent input line transient response and audio rejection is achieved by an advanced feed-forward compensation technique. For dual outputs, negative output regulation is maintained by tightly coupled magnetics. Up to 4.8 watts, 80% of the total output power, is available from either output, provided that the opposite output is simultaneously carrying 20% of the total power in order to maintain the specified regulation on the negative output.

A predictable current limit is accomplished by direct monitoring of the output load current, which results in a constant current output. Internal input and output filters eliminate the need for external capacitors for stable operation. Figure 3 on page 4 illustrates output filter examples. Figure 4 on page 4 provide suggested solutions for systems where very low output ripple is required.

WIDE VOLTAGE RANGE

The MSA+ converters are designed to provide full power operation over a 15 to 50 volt input range.

DYNAMIC RESPONSE

The feed-forward compensation system provides excellent dynamic response and audio rejection. Audio rejection is typically 50 dB.

SPAN VOLTAGE

Our duals can be configured as a single output where the positive output is used as one rail and the negative output is used as the other rail. As an example the positive and negative 15 volt dual can be configured as a single 30 volt output. If the dual is configured as a positive 30 volt output the negative output would be used as system ground and the positive output would be used as the positive 30 volt output. In all cases Output Common of the converter is not connected. The maximum capacitance when using a span voltage on a dual is half the value specified for each output.

FIGURE 6: MSA+ MODEL NUMBERING KEY

MODEL NUMBER OPTIONS ¹					
TO DETERMINE THE MODEL NUMBER ENTER ONE OPTION FROM EACH CATEGORY IN THE FORM BELOW.					
CATEGORY	Base Model and Input Voltage	Output Voltage ²	Number of Outputs ³	Case Options ⁴	Screening ⁵
OPTIONS	MSA+28	3.3, 05, 5R2, 12, 15	S	(non-flanged, leave blank)	(standard, leave blank)
		05, 12, 15	D	F (flanged)	ES /883
FILL IN FOR MODEL # ⁶	MSA+28	_____	_____	_____	/ _____

Noes

- See Figure 6 above for an example of a model number.
- Output Voltage: An R indicates a decimal point, i.e. 3R3 is 3.3 volts out. The values of 3.3 and 5.2 are only available in single output models.
- Number of Outputs: S is a single output and D is a dual output.
- Case Options: For the standard case (Figure 7 on page 11) leave the Case Option blank. For the flanged case option (Figure 8 on page 12), insert the letter F in the Case Option position.
- Screening: For standard screening leave the screening option blank. For other screening options, insert the desired screening level. For more information see Table 8 on page 13 and Table 9 on page 14.
- If ordering by model number add suffix "-Q" to request solder dipped leads (MSA+2805S/ES-Q).

INHIBIT ACTIVE HIGH (OUTPUT ENABLED) Do not apply a voltage to the inhibit pin. ³	INHIBIT PIN CONDITION	OPEN COLLECTOR OR UNCONNECTED			
	OPEN PIN VOLTAGE ¹	9.5	—	11.5	V

Notes

1. Guaranteed by qualification test and/or analysis. Not a production test.

2. Current limit is defined as the point at which the output voltage decreases by 1%.

Dual outputs: The over-current limit will trigger when the sum of the currents from both outputs reaches 130% (typical value) of the maximum rated "total" current of both outputs.

3. An external inhibit interface should be used to pull the inhibit low or leave it floating. The inhibit pin can be left unconnected if not used.

Notes

1. Guaranteed by characterization test and/or analysis. Not a production test.
2. Up to 4.8 watts (80% of full power) is available from either output providing the opposite output is carrying 20% of total power.
3. Shows regulation effect on the minus output during defined cross loading conditions.
4. Indefinite short circuit protection not guaranteed above 125°C (case).

5. Recovery time is measured from application of the transient to point at which V_{out} is within 1% of V_{out} at final value.

6. Step load test is performed at 10 microseconds typical.

7. Step line test is performed at 100 microseconds ± 20 microseconds.

8. Each output.

MSA+ Single and Dual DC-DC Converters

PRELIMINARY - 15 TO 50 VOLT INPUT - 6 WATT

Weight: 30 grams maximum

Case dimensions in inches (mm)
Tolerance ± 0.005 (0.13) for three decimal places
 ± 0.01 (0.3) for two decimal places
unless otherwise specified

CAUTION

Heat from reflow or wave soldering may damage the device.
Solder pins individually with heat application
not exceeding 300°C for 10 seconds per pin.

Materials

Header Cold Rolled Steel/Nickel/Gold
Cover Cold Rolled Steel/Nickel
Pins #52 alloy, gold, compression glass seal
Gold plating of 50 - 100 microinches included in pin diameter
Seal hole: 0.070 ± 0.003 (1.78 ± 0.08)

Please refer to the numerical dimensions for accuracy.

Test methods are referenced to MIL-STD-883 as determined by MIL-PRF-38534.

Notes

1. Non-QML products may not meet all of the requirements of MIL-PRF-38534.
2. All processes are QML qualified and performed by certified operators.
3. Not required by DLA but performed to assure product quality.
4. Burn-in temperature designed to bring the case temperature to +125°C minimum.
Burn-in is a powered test.
